

3571 King Springs Rd SE  
Smyrna, Ga 30080

The corner of the fence is well within 25' from the center of the intersection.

The existing fence is at 4'. A 5' fence will not look that much taller as the floor of the fence is well below street level.

The drawing shows the extended view of the street in comparison to the existing fence. A 5' fence would not differ much visually.

Another view from the street.

View from the street shows the existing fence height. A 5' fence would not look much taller.

Shows 5' on the new column.

Sample of fence to be installed. Not to size. Just for style reference.

Another sample of style.

\* The request for a 5' tall fence is primarily for security reasons as unfortunately we live in a time where as homeowners we need little things to help us feel safer even in our own homes. We have already experienced "casing" as described by a Smyrna Police Officer when we lived in our townhouse on the corner of Atlanta and Spring Rd. We also had a traumatic experience last year where a home-invader raped and murdered a very close friend of ours in Decatur.

\* Please know that we love living in Smyrna, and love the improvements occurring throughout the City and we would never build anything on our property not aesthetically appealing to the surrounding areas. The fence would be of black metal and match our existing decor. It would also match the other new homes that were built around the same time as our house. The 5' fence would also not block any views for drivers as the corner of the fence is well within the 25' required distance. We also plan to plant more trees and plants around the fence.

Thank you.
