Lift Axle:

Alignment of lift axle must be performed by end user prior to the unit being placed in service. Failure to properly align the axle prior to being placed in service can cause non-warrantable failure, including but not limited to premature tire wear. The end user is responsible for the alignment prior to placing the unit in service.

PTO Maintenance:

Per OEM manufacturer guidelines the following recommendations should be followed. Failure to follow OEM guidelines can result in non warrantable failure.

Within the first week of use, recheck the installation of the PTO. Check for leaks and loose mounting hardware (nuts, cap screws, nuts). Recheck the cable or lever connections for proper adjustment and tighten any loose connections. At regular maintenance intervals, check adjustments and lubricate moving parts, tighten and repair the connections, mounting hardware, cable or lever linkage. Refer to OEM owners manual for regular maintenance intervals.

**By signing below I acknowledge that I have reviewed the specs above and confirmed they are correct. I understand that once my order is placed and sent into production that I will not be able to make changes to the order. I assume full ownership of the body once production begins.
